What is Minecraft Coding?

4 days of Coding with Minecraft

Mods

Day 1 - Get an introduction to Minecraft and what it means to "Mod Minecraft." Understand the environments of the simulator and your own private minecraft server. Introduction to functions, world edit commands, drones, and enemies/mobs.

Coding

Day 2 - This day will require you to be unafraid of failure by using trial and error to learn the basics of coding. All we need is your growing logic skills and a bit of patience. Pick a Level 1 challenge and the code modules will guide you through the rest!

Drone Tool

Day 3 -You will now control the game through code. Building with the drone tool: discover the incredible power of the drone tool as you build massive or complex structures with ease. Combine building with the drone tool with the power of functions and loops. Make the game do what YOU want; at a keystroke.

Mini Games

Day 4 - Make basic games in Minecraft by customizing a Spleef style game. Your personal project mod or game will use all you have learned during the summer camp. Once your project is done, share and test others classmates creations.
